

## Sonogram Facts and Info

### **How safe is 3D/4D ultrasound?**

Ultrasound has been a routine practice in prenatal care throughout the U.S. It has been studied for over 35 years, and has been shown to cause no harm to either mother or baby. Your 3D/4D ultrasound session utilizes the same type of ultrasound as a regular 2D scan performed in our office.

### **When is the best time to have a 3D/4D Sonogram?**

Anytime between 28 & 34 weeks of pregnancy. Our practice has specific guidelines that we follow to obtain the best images. Please call our office to find out more information about the best time in your pregnancy to come in for your session.

### **Do I need to set up an appointment?**

Yes, we do require that you make an appointment.

### **How much does a 3D/4D Sonogram cost, and is it covered under my insurance plan?**

Unfortunately, because this is an elective procedure it is not covered under any type of insurance plan. Our practice charges \$125.00 for this service and it is non-refundable. We can offer you 2-3 black and white images but the images will be sent to your phone or email and you can reproduce as many color photos as you would like.

### **Are you able to guarantee good pictures?**

No. We cannot guarantee that the baby will cooperate during your session. Certain factors such as body tissue content, developmental stage and fetal position all affect the ability to get good images.

### **Can I bring friends and family to my appointment?**

Yes, our practice encourages friends and family to attend your session. Up to 3 guests may attend.
